

1. _____ is used only with SELECT statement to specify a search condition for a group.

- A. HAVING
- B. GROUP BY
- C. WHERE
- D. LIKE

2. Which predicate of Transact-SQL should a user use to search precise match to a phrase?

- A. IN
- B. CONTAINS
- C. LIKE
- D. BETWEEN

3. HOST_NAME is an example of _____ function in SQL.

- A. Conversion
- B. String
- C. System
- D. Rowset

4. Which is the programming language that is used to communicate with databases?

- A. Python
- B. T-SQL
- C. Java
- D. C

5. Identify the correct syntax used to delete a database using Transact-SQL.

- A. DROP DATABASE [databasename]
- B. ALTER DATABASE database_name
- C. DELETE DATABASE [databasename]
- D. REMOVE DATABASE [databasename]

6. The primary default filegroup can be changed using the _____ statement.

- A. CHANGE DATABASE
- B. ALTER DATABASE
- C. MODIFY DATABASE
- D. DELETE DATABASE

7. Which operation does the transaction log not support?

- A. Query the database
- B. Recovery of individual transactions
- C. Recovery of all incomplete transactions when SQL Server is started

D. Transactional replication

8. Identify the code snippet that marks a transaction.

- A. BEGIN TRANSACTION DeleteCandidate WITH N'Deleting a Job Candidate'; GO DELETE FROM HumanResources.JobCandidate WHERE JobCandidateID = 11; GO COMMIT TRANSACTION DeleteCandidate;
- B. BEGIN TRANSACTION DeleteCandidate WITH NO MARK N'Deleting a Job Candidate'; GO DELETE FROM HumanResources.JobCandidate WHERE JobCandidateID = 11; GO COMMIT TRANSACTION DeleteCandidate;
- C. BEGIN TRANSACTION DeleteCandidate WITH MARK N'Deleting a Job Candidate'; GO DELETE FROM HumanResources.JobCandidate WHERE JobCandidateID = 11; GO COMMIT TRANSACTION DeleteCandidate;
- D. BEGIN TRANSACTION DeleteCandidate WITH UNMARK N'Deleting a Job Candidate'; GO DELETE FROM HumanResources.JobCandidate WHERE JobCandidateID = 11; GO COMMIT TRANSACTION DeleteCandidate;

9. Identify the correct code to display the severity of the error.

- A. BEGIN TRY SELECT 217/0; BEGIN CATCH SELECT ERROR_SEVERITY() AS ErrorSeverity; END CATCH; END TRY
- B. BEGIN TRY SELECT 217/0; BEGIN CATCH SELECT ERROR() AS Error; END CATCH; END TRY
- C. BEGIN TRY SELECT 217/0; BEGIN CATCH SELECT ERROR_LINE() AS ErrorLine; END CATCH; END TRY
- D. BEGIN TRY SELECT 217/0; BEGIN CATCH SELECT ERROR_STATE() AS ErrorState; END CATCH; END TRY

10. Which of the following statements about Polybase are true?

- A. Polybase enables relational and non-relational data to be combined
- B. Polybase runs queries on the external data source
- C. Polybase allows tables to be migrated to an external database
- D. None of these

11. Which of these is a correct syntax for BEGIN....END?

- A. BEGIN { sql_statement|statement_block } END
- B. BEGIN { sql_statement } END
- C. BEGIN { }
- D. BEGIN { statement|statement_block } END

12. Identify the features of explicit transactions.

- A. These transactions are defined by programmers.
- B. DML statements are included to execute as a unit.
- C. SELECT statements are not included as they do not modify data.
- D. SQL Server will roll back the entire statement.

13. _____ system function returns the number of BEGIN TRANSACTION statements that occur in the current connection.

- A. BEGIN
- B. ROLLBACK
- C. SAVE TRANSACTION
- D. @@TRANCOUNT

14. What does msg_str state in the following syntax?

```
RAISERROR ( { msg_id | msg_str | @local_variable }  
           { ,severity, state }  
           [ ,argument [...n] ] )  
           [ WITH option [...n] ]
```

- A. Specifies the user-defined error message number that is stored in sys.messages using sp_addmessage
- B. Specifies the user-defined message with formatting; msg_str is a string with optional embedded conversion specifications
- C. Specifies an integer that defines the minimum width for the field
- D. Specifies the code that determines spacing and justification of the substituted value

15. Which cloud service provider offers Azure Synapse Analytics?

- A. IBM Cloud
- B. AWS
- C. Google
- D. Microsoft Azure
