

1. Which of the following commands must be used to modify a table definition to add columns to it?

- A. MODIFY
- B. ALTER
- C. CHANGE
- D. AMEND

2. The _____ statement is not supported by SQL Azure due to which the user cannot switch between databases in SQL Azure.

- A. UPDATE
- B. USE
- C. INSERT
- D. ALTER

3. Azure SQL database is suited for applications that require _____.

- A. Full product functionality
- B. Elastic scale
- C. Lesser overhead
- D. Backup

4. Identify the characteristics of RDBMS.

- A. It is a multi-user system.
- B. It does not support client/server architecture.
- C. It cannot store and retrieve large amounts of data.
- D. It is more secure.

5. Identify the data model type.

- A. Relational data model
- B. Flat file data model
- C. Hierarchical data model
- D. Network data model

6. How to identify tables in second normal form?

- A. The tables are related through foreign keys.
- B. The tables meet the requirements of the first normal form.
- C. The tables are related through alternate keys.
- D. There are no partial dependencies in the tables.

7. Which of the following statements about Polybase are true?

- A. Polybase enables relational and non-relational data to be combined
- B. Polybase runs queries on the external data source
- C. Polybase allows tables to be migrated to an external database
- D. None of these

8. What does msg_str state in the following syntax?

```
RAISERROR ( { msg_id | msg_str | @local_variable }  
          { ,severity,state }  
          [ ,argument [...n] ] )  
          [ WITH option [...n] ]
```

- A. Specifies the user-defined error message number stored using sp_addmessage
- B. Specifies the user-defined messages with formatting; msg_str is a string with optional embedded conversion specs
- C. Specifies an integer defining minimum field width
- D. Specifies spacing and justification code for substituted value

9. In PolyBase architecture, the _____ contains the SQL Server instance to which PolyBase queries are submitted.

- A. Head node
- B. Compute node
- C. Scale-out reads
- D. Scale-in reads

10. Identify the code that would return an approximate value based on the given percentile number and sort condition.

- A. APPROX_PERCENTILE_DISC (0.25 PERCENTILE) WITHIN GROUP (ORDER BY Marks) FROM Students;
- B. APPROX_PERCENTILE_DISC (0.25) WITHIN GROUP (ORDER BY Marks) FROM Students;
- C. APPROX_PERCENTILE_DISC (0.25) WITHIN GROUP (GROUP BY Marks) FROM Students;
- D. APPROX_PERCENTILE_DISC (0.25) FROM Students WITHIN GROUP (ORDER BY Marks);

11. Which is the programming language that is used to communicate with databases?

- A. Python
- B. T-SQL
- C. Java
- D. C

12. Identify the correct syntax used to delete a database using Transact-SQL.

- A. DROP DATABASE [databasename]
- B. ALTER DATABASE database_name
- C. DELETE DATABASE [databasename]
- D. REMOVE DATABASE [databasename]

13. The primary default filegroup can be changed using the _____ statement.

- A. CHANGE DATABASE
- B. ALTER DATABASE
- C. MODIFY DATABASE
- D. DELETE DATABASE

14. Which operation does the transaction log not support?

- A. Query the database
- B. Recovery of individual transactions
- C. Recovery of all incomplete transactions when SQL Server is started
- D. Transactional replication

15. Which data type returns automatically generated, unique binary numbers within a database?

- A. table
- B. geometry
- C. xml
- D. rowversion
